Opis produktu

Ideal for portraits, headshots, interviews, and fashion, the 150cm Para 150 Softbox with Bowens Mount from Nanlite is a 16-sided hexadecagon-shaped modifier. The structure of the Para 150 is fortified by 16 durable support rods, while its silver interior maximizes your light source's output. It offers focused, soft output with a punchy, crisp edge that lends dimension and detail to your subject as well as natural-looking catchlight in their eyes. Additionally, the parabolic shape of the modifier renders significant falloff at the field edge and therefore an enhanced degree of directional control, decreased spill light, and easy feathering.

Whats in the Box:
